

A Company Snapshot:

Henry Turner founded Turner Construction Company 111 years ago based on the core values of teamwork, integrity and commitment. Today, The company's reach is global, and each of its offices upholds its founder's vision to provide valuable services to clients, build partnerships in the community, and deliver important resources such as schools, hospitals, workplaces, and social and cultural centers.

The Challenge:

Excelhelp.com studied their current process and made recommendations based upon an existing system to allocate project resource management. Turner looked to ExcelHelp.com as an intermediary step between their existing system and a much larger, more expensive resource management system.

The Solution:

ExcelHelp engineered a hybrid Microsoft Excel / Access custom application with simultaneous multi-user functionality. Localized Excel front ends were deployed to staff desktops providing the ability to update multiple sites, projects, resources. In addition to updating, this utility supplied management with all types of analytics including reporting of trends, actual data, future business planning, forecasting models and projection data to compartmentalize and streamline their resource management.

Key Client Benefits:

Eliminated need to transition to larger more expensive system and save hundreds of staff hours monthly while streamlining a once cumbersome and time consuming process that was prone to manual data entry error issues and an enormous forecasting and reporting gap. System is easily upgradeable due to separate front end and backend platforms.
